DESCRIPTION
TATREN IM 25 75 is a controlled rheology impact copolymer of good fluidity, excellent impact resistance at room temperature, very good impact resistance at minus temperatures and improved stiffness. This grade contains nucleating and antistatic agent.

APPLICATIONS
TATREN IM 25 75 is intended especially for injection moulding of heavy-duty products where very high impact resistance at room temperature combined with good stiffness is required. Typical end products are storage and transport containers, medical containers, crates and rigid boxes, luggage, pails, car parts and other technical and heavy-duty applications.

TATREN IM 25 75 is suitable to be used as matrix for compounds intended for automotive industry as well as for other industrial sectors. The grade meets requirements for toys production.

TATREN IM 25 75 is suitable for food contact. The product complies with Food Contact Regulations. The grade is suitable for manufacturing of pharmaceutical packing-product.

* Average mechanical property values of several measurements carried out on standard injection-moulded test specimens prepared in accordance with ISO 1873-2.
**Values have been measured on standard injected moulded specimens prepared in accordance with internal method.

PROCESSING
TATREN IM 25 75 can be processed on standard injection moulding machines. Recommended processing temperatures are 190 - 250°C.

**STORAGE AND HANDLING**

Pellets are packed in 25 kg PE-LD bags and transported on stretch or shrink-wrapped pallets at eligible load of polymer 1375 kg. Heat treated pallets are available as well. We use adhesive between the bags in order to avoid their slipping. Pay attention to this fact during the removing of the bags from the pallets. The preferred method is to lift the bag at first without rotation. Transportation in a road silo or rail silo is also available. For more detailed information please contact SLOVNAFT and MOL Petrochemicals sales representative.

Since polypropylene is a combustible substance, the fire safety rules applicable for combustible materials in warehouses and store rooms should be observed.

If polymer is stored in conditions of high humidity and fluctuating temperatures, then atmospheric moisture can condense inside the packing. If it happened, it is recommended the pellets to be dried before use. During the storage polypropylene should not be exposed to UV radiation and temperatures above 40°C. Producer does not take responsibility for any damages caused by adverse storage.

---

**REACH STATEMENT**

Polymer are exempt of REACH registration. However, their raw materials which mean monomers and relevant additives have been registered. SLOVNAFT, a.s. is committed to fully respect legislation and will only use REACH compliant raw materials. At this point in time PP TATREN does not contain any substances specifically identified as SVHC at levels greater than 0.1%.

---

**SAFETY**

See MSDS.

---

**RECYCLING**

Polypropylene resins are suitable for recycling using modern recycling methods. In-house production waste should be kept clean to facilitate direct recycling.

---

**DISCLAIMER**

The information provided in this publication has been compiled to the best of our present knowledge. However, in view of the various applications of polypropylene resins and the equipment used, the processing conditions may differ.

The recommendations and data herein are to be construed as informational only and do not relieve users from carrying out their own tests and experiments prior to processing in order to check suitability for a specific use. It is the responsibility of those to whom we supply our products to ensure that any proprietary rights and existing laws and legislation are observed. Our products are under continuous development, therefore we reserve the right to change the information presented in this brochure at our own discretion. The REACH statement herein does not constitute legal advice. The REACH statement is provided for informational purpose only.
